Practice Quiz: Introduction to Programming

TOTAL POINTS 5

1. What's a computer program?   `1 / 1 point`

   ○ A set of languages available in the computer

   ○ A process for getting duplicate values removed from a list

   ◉ A list of instructions that the computer has to follow to reach a goal

   ○ A file that gets copied to all machines in the network

   > ✓ **Correct**
   > You nailed it! At a basic level, a computer program is a recipe of instructions that tells your computer what to do.

2. What's the syntax of a language?   `1 / 1 point`

   ◉ The rules of how to express things in that language

   ○ The subject of a sentence

   ○ The difference between one language and another

   ○ The meaning of the words

   > ✓ **Correct**
   > Right on! In a human language, syntax is the rules for how a sentence is constructed, and in a programming language, syntax is the rules for how each instruction is written.

3. What's the difference between a program and a script?   `1 / 1 point`

   ◉ There's not much difference, but scripts are usually simpler and shorter.

   ○ Scripts are only written in Python.

   ○ Scripts can only be used for simple tasks.

   ○ Programs are written by software engineers; scripts are written by system administrators.

   > ✓ **Correct**
   > You got it! The line between a program and a script is blurry; scripts usually have a shorter development cycle. This means that scripts are shorter, simpler, and can be written very quickly.

4. Which of these scenarios are good candidates for automation? Select all that apply.   `1 / 1 point`

   ☑ Generating a sales report, split by region and product type

   > ✓ **Correct**
   > Excellent! Creating a report that presents stored data in specific ways is a tedious task that can be easily automated.

   ☐ Creating your own startup company

   ☐ Helping a user who's having network troubles

   ☑ Copying a file to all computers in a company

   > ✓ **Correct**
   > Nice work! A task like copying files to other computers is easily automated, and helps to reduce unnecessary manual work.

   ☐ Interviewing a candidate for a job

   ☑ Sending personalized emails to subscribers of your website

   > ✓ **Correct**

Great job! Sending out periodic emails is a time-consuming task that can be easily automated, and you won't have to worry about forgetting to do it on a regular basis.

☐ Investigating the root cause of a machine failing to boot

5. What are semantics when applied to programming code and pseudocode?   1 / 1 point

○ The rules for how a programming instruction is written

○ The difference in number values in one instance of a script compared to another

◉ The effect the programming instructions have

○ The end result of a programming instruction

✓ **Correct**
Nice job! Like human language, the intended meaning or effect of words, or in this case instructions, are referred to as semantics.
